

UPWARD TREND OF WHEAT RECEIVED A CHECK—CORN STRONG

WHEAT STARTED OFF BOLDLY AND GAINED IN PRICE, BUT IT WEAKENED OFF A LITTLE LATER.

STILL SHOWED A SMALL GAIN.

SENTIMENT FAVORED BUYING OF CORN AND THE MARKET WAS STRONGER, CLOSING HIGHER.

OATS ALSO SOME BETTER.

Office Republic.

Thursday, March 30, 1900.

While the dealings of wheat today were not so large as yesterday, the pit showing occasional dull periods, the actual business transacted was very fair and of a character to encourage the bull feeling that has prevailed for several days past. At the same time the tone of the different markets, all things considered, early in the day was almost as strong as yesterday since the upward movement of prices set in. The higher prices naturally led to some selling to realize profits, which was also influenced to some considerable extent by a lack of bullish advice, such as were had yesterday. Then again the bears, taking advantage of certain conditions, showed a disposition to move lower prices, hoping thereby to check the advancing tendency, it not to bring about a recession in values. Sentiment, however, was too strong, and they met with no material success, the markets offering considerable resistance, and while the best prices of the day were not maintained, the closing of the market was still slightly higher, corn, in particular, showing strength and closing better than wheat.

The local wheat market today, while not so emphatically bullish as on yesterday, exhibited strong resistance to factors of a depressing character, and a very good undertone of strength, especially when wheat prices made further progress toward a higher level, but which was not altogether maintained to the close, values easing off from the top and showing only a fractional improvement for the day. The influences so powerful yesterday and which exerted so much of an effect upon values and trading were not on top this morning. The weather was a little colder, but severe cold and the predicted sleets were covered only a very small portion of the extreme northern edge of the winter wheat belt. War between Russia and Turkey was again heard of, and the French crop damage and 20 per cent shortage was refuted by the report of a United States Consul, which made the yield 20,000,000 bu. less than the big crop of 1899. Again, Liverpool did not respond as freely as expected to our advance of over 10c, the improvement there being but 1d, and receipts on this side at receiving points showed up largely. Arrivals in the Northwest were 48 cars, against 50 a year ago, and today there was received 10,550 bu. as compared with 6,304 bu. last year.

The market made a good start in spite of the lack of stimulating conditions. The sentiment still leaned toward the bull side and there was pressure to sell, which, with the unmistakable strength shown by corn, so brightens the outlook. There was a little difficulty in advancing prices, and the best prices of the day went on record. The sell-off was better for July, at 69c, which sold off to 68c, but the market was not so sharply, selling at 67c, but the upturn was checked. May, in the meantime, opened the same as it closed yesterday, at 70c, was offered at 70c, and today it went up to and sold at 71c. The advance at this time was very bullish, and included a Paris cable, reporting 5c advance there. Duluth reported a big crop of 1,000,000 bu. for the United Kingdom and the continent accepted, and 50,000 bu. taken. Traders bought eagerly on this news, but after the demand had been satisfied there was a decline, and May declined to 69c, and July to 68c. Clearances were small, at 17,000 bu. in flour and wheat, and the total for the week was only 1,310,000 bu., against 1,250,000 bu. last week. The cash situation was discouraging, but the market was reported that market but up for the day. The closing hour of the market here was quiet and heavy, but the market was not so quiet, and prices were quite well maintained, and July did not go below 69c, while March was offered at 70c and closed 71c, better, at 70c, but March was nominally up, at 71c.

Corn assumed the leadership in point of strength again today, showing gains all through the day, such changes as took place here being insignificant. The slight decline in the receipts at Kansas City, and the influence, as did the cables, which reported Liverpool 1d higher for cash and futures here. Chicago, however, was the dominating influence, that market being strongly bullish and more favorable to the buying side than it was on yesterday, and the market opened on this side, and correspondingly depressed the bears. The May option opened the same as it closed yesterday, at 70c, and soon went up to 71c. July opened a shade lower at 69c, went off to 68c, and then reacted to 69c, and the market was not so quiet, and prices were quite well maintained, and July did not go below 69c, while March was offered at 70c and closed 71c, better, at 70c, but March was nominally up, at 71c.

Trade Gossip.

That cable of yesterday, which claimed the French wheat crop was 20,000,000 bu. less than the big crop of 1899, was not so strong as it seemed, and the market was not so quiet, and prices were quite well maintained, and July did not go below 69c, while March was offered at 70c and closed 71c, better, at 70c, but March was nominally up, at 71c.

Cash Grain, Flour, Etc.

WHEAT—Cash Market—Received, 20c and 12c on four. Not a 10c advance could be realized for soft winter, and the demand was weak. Offerings small and very little, and straight wheat in. By sample No. 2 red sold at 71c, and No. 2 white at 70c, and No. 2 white at 69c, and No. 2 white at 68c, and No. 2 white at 67c, and No. 2 white at 66c, and No. 2 white at 65c, and No. 2 white at 64c,
